EDUCATION

University of Edinburgh

MSc Computer Science (High-Performance-Computing and Data Science) — First 2025 – 2026

Brunel University London

B.Sc. Artificial Intelligence — 2:1 2022 – 2025

Bath Academy

Associate Degree in Computer Science — 1st Class 2021 – 2022

EXPERIENCE

Apply University, London

Jan 2026 – May 2026

Full-Stack Developer & Data Engineer

Built a UK university course intelligence platform from scratch for a student immigration consultancy, now covering 3,500+ courses across 50+ UK institutions. Engineered Python scrapers (BeautifulSoup) to extract fees, entry requirements, and intake dates from official university sources, with AI-assisted parsing into clean, validated records. Deployed a full CRM on Railway with PostgreSQL/Supabase — applicant portal, visa workflow tracking, document management, HubSpot sync. Added automated Excel exports and a Chrome extension for real-time course enrichment. Owned the system end-to-end, from architecture to production.

Goldman Sachs, London, UK

Jul 2025 – Sept 2025

Risk & Operations Analyst Internship

Supported Goldman Sachs' Risk and Operations teams on risk assessment, credit analysis, and operational issue resolution. Analysed financial and real estate data to identify risk exposures and recommend mitigation strategies and contributed to improving trade settlement and asset transfer processes. Worked cross-functionally with Trading, Compliance, and IT, applying operational risk management and regulatory best practices.

My Arman Education Group LTD, London, UK

Jul 2025 – Sept 2025

Learning Technology Team Member

Contributing to designing and developing a scalable Canvas LMS for Arman Institution at Level39, featuring performance tracking and personalized analytics. Delivered custom modules and dashboards while collaborating with fintech and edtech experts and supported digital education transformation at Level39.

AWARDS AND SELECTIONS

- Gold Medalist, national physics Olympiad, 2020, Iran
- Won the National Physics Olympiad Gold Medal, ranking 3rd in the country, earned admission to any university in the country
- Represented Iran in the Asian Physics Olympiad 2020, India
- Participated in the Edinburgh University engineering AI hackathon; built an event-organizing assistant powered by an MCP server integrating five different APIs

SKILLS

Programming: Python, MATLAB, C++, Java, HTML, SQL, C#

Software Tools: GitHub, GitLab, MS Office, SolidWorks, Unity

PROJECTS

Hierarchical Multi-Class Fake News Detection

Python, PyTorch, Hugging Face Transformers, BERT, Docker, NLP preprocessing, Git

Developed a hierarchical AI system for fine-grained fake news detection, capable of identifying emerging misinformation types including AI-generated content and clickbait. Built a two-stage architecture separating coarse semantic grouping from fine-grained classification, allowing new categories to be added without retraining the full model. Implemented preprocessing pipelines, optimized performance, and deployed the system in a production-ready environment for real-time classification.

Automated Data Pipeline & CRM Platform (aryam.co.uk)

Python, Supabase (PostgreSQL), REST APIs, BeautifulSoup, Flask, Railway, Excel/OpenPyXL, JSON

Designed and built a full-stack data platform end-to-end, from automated data collection to production deployment. Engineered web scrapers to extract and normalise structured data from 50+ external sources, with AI-assisted parsing to validate and clean unstructured input before storage. Built a REST API backend on Flask, deployed on Railway, backed by a PostgreSQL database via Supabase. Developed a CRM module on top of the platform with record tracking, workflow management, and document handling, plus automated Excel export pipelines for reporting. Handled the full system lifecycle — architecture, data ingestion, backend development, and deployment.
